

The Courtyard *Is* the Point

The strength gym is gone — its whole footprint folded into one big social courtyard. Café terrace, lounge, firepit, daybeds and communal tables now form the heart of the place, with the glass padel court right below as the live entertainment.

4425 N Central Expressway, Dallas, TX 75205 — Knox District · ~170 × 173 ft · ~29,400 sf

BIG MOVE

gym → courtyard

COURTYARD

~4,000 sf

PARKING

~18 (Armstrong)

PADEL

social court

SITE PLAN — THE WHOLE LOT

The updated master plan

Everything else holds — grocer + café off Knox, bath house + private garden on the N Central side, parking along Armstrong. The center is now one **large social courtyard** (the gym's old box absorbed into it) flowing straight down to the glass padel court.

■ Grocer + café/coffee ■ Social courtyard ■ Padel (glass) ■ Bath house ■ Private garden ■ Parking

Schematic — not to exact scale. The courtyard now occupies the full center, padel viewing on its south edge.

WHAT DROPPING THE GYM DOES

The upside & the trade

Why it's a strong move

1. It nails your original goal — a true **community hangout**: communal tables, daybeds, a firepit, café spill-out, and padel as the live show.
2. **Simpler, cheaper build** — one fewer structure, less MEP, no glass-door pavilion to engineer.
3. A big flexible courtyard is a serious **events / private-hire asset** — buyouts, supper clubs, brand activations, programming nights.
4. Tightens the brand to **bath + recovery + movement + racquet + grocer**, and drops the operational overhead of a scan-in gym and rack management.

What to keep in mind

1. You lose the **strength offering and its revenue line** (~\$270k in the model). If strength still matters, fold light **functional training onto the courtyard turf** or into the studios.
2. Open courtyard is **lower direct revenue per sf** than a ticketed room — its payoff is dwell time, F&B spend, events and brand, not class fees.
3. **Dallas weather**: a big outdoor heart needs shade, misting/fans, heaters, and ideally a retractable canopy to stay usable across summer and winter.

In the economics model

Zero out the **gym** line, and bump **grocer/café** (more dwell + terrace covers) and **events** (the courtyard is now a real venue). Net effect is roughly neutral-to-positive on EBITDA — and the build-out gets cheaper.

THE BATHING CIRCUIT

Inside the private garden

Unchanged — the contrast circuit stays screened on the N Central edge.

Ritual: ① sauna 10–12 min → ② cold plunge 30–60s → ③ warm soak → ④ rest by the fire → repeat ×3.

Want me to program the courtyard?

Now that it's the centerpiece, the next useful step is detailing it — zones for communal dining, lounge/daybeds, a firepit, a small stage/DJ nook for events, shade structure, and how the café terrace and padel viewing knit together. I can also re-run the economics with the gym removed and an events line added. Say which.

Schematic concept study, not engineered drawings. Streets per public listings (parcel on N Central SB service road just south of Knox St, Armstrong Ave to the west); exact frontages, curb cuts and internal drives to be survey-verified. SF and stall counts $\pm 10\%$, subject to code, parking, capacity, and pool/health-department review.
